

Sources, Claims & Validation Ledger

Traceability for the presentation, documents, skill suite, and release package.

THE INTELLIGENCE LAYER FOR MARS

Release 5 • 04 September 2026

Claim ledger

Claim	Source	Treatment
Mars links experience non-trivial delay and disruption	NASA Mars communications brief	Mission constraint; no remote-driving assumption
MOXIE ran 16 times and produced 122 g total	NASA mission report	Observed demonstration fact
MOXIE peak was 12 g/h at ≥98% purity	NASA mission report	Observed demonstration fact
Harness contains seven functional layers	Project synthesis of agent-system design	Architecture proposal, not external fact
SaaS workflows can be represented as portable skills	Project design pattern	Bounded emulation; no feature-parity claim

Validation ledger

Artifact	Check	Result
PowerPoint	20 slides, timings total 1800 seconds, overflow test	Pass
Presentation PDF	20 rendered slide pages	Pass after page-count verification
Support PDFs	Open, extract text, render first/last pages	Pass after automated and visual QA
Skills	Frontmatter, required sections, no placeholders, ZIP roots	Pass after validators
Website	All local links resolve; controls keyboard-operable; responsive CSS	Pass after automated scan
Release	SHA-256 manifest and ZIP integrity	Pass after packaging

Interpretation discipline

Observed and Derived evidence may support a validated conclusion when provenance and method are intact. Assumptions must remain explicit. Unknowns are first-class outputs. Independent validation is required for consequential promotion, and human approval remains mandatory for high-impact action.
